

Figure 2. Updated west-east stratigraphic cross-section across the Liard Basin, based on the seismic interpretation presented in this study (Leslie-Panek et al., in press). The red lines and text indicate the ten seismically significant stratigraphic markers that were mapped in the seismic interpretation. This new information improves the stratigraphic interpretation of the Lower Besa River group interval from the original interpretation of Morrow and Shinduke (2003).

Acknowledgements

The authors would like to acknowledge Explor and Pulse Seismic for allowing the Geological Survey of Canada permission to publish this paper. Helpful discussions with Barry Richards, Glen Stockmal, Elizabeth Atkinson and Heather King are gratefully acknowledged. Funding for this study was provided by the Geological Survey of Canada's Geoscience for New Energy Supply (GNES) program.
